OS

STEP-BY-STEP OWNER TUTORIAL & HANDBOOK

RestaurantOS

The Complete Beginner's Guide for Restaurant Owners

How to upload food, run billing, manage kitchen & see daily profit with ZERO computer experience.

WHAT THIS SIMPLE MANUAL TEACHES YOU:

- Chapter 1: Where everything is on your screen (Buttons, Icons & Menus)
- Chapter 2: How to upload your Menu, Categories, Food Dishes & Prices
- Chapter 3: Taking orders & billing in 10 seconds at the cash counter (POS)
- Chapter 4: Accepting Cash, UPI QR code & Card payments with printed GST bills
- Chapter 5: Managing Tables (Green = Clean, Red = Eating, Yellow = Bill Ready)
- Chapter 6: Kitchen Display & Kitchen Order Tickets (KOT) for your cooks
- Chapter 7: Managing Storeroom & Ingredients (Rice, Oil, Paneer, Chicken)
- Chapter 8: Staff management & giving employees simple 4-digit PIN passwords
- Chapter 9: The Daily Routine: Morning opening, lunch rush & night Z-Report closing
- Chapter 10: "Don't Panic" answers to common questions (printer, offline, mistakes)

Official RestaurantOS Customer Onboarding Kit — Version 2026 Edition

CHAPTER WELCOME: A FRIENDLY MESSAGE TO THE RESTAURANT OWNER

Take a deep breath — this software was built for you

1. Running a Restaurant is Hard. Software Should Be Easy.

Dear Restaurant Owner, congratulations on using RestaurantOS! We know that running a food business is one of the hardest jobs in the world. You manage cooks, buy fresh vegetables at 6 AM, greet customers, and make sure the food tastes delicious every single day.

You do NOT need to be a computer engineer or a technical genius to operate this software. If you can send a message on WhatsApp or make a call on your mobile phone, you already know 90% of what is required. This guide is written with zero confusing computer words. Every step has exact pictures and buttons to look for.

2. The 3 Golden Rules for Beginners

1

Rule #1: You Cannot Break The Software

Feel free to click buttons and explore! Nothing will explode, no data will be lost, and you cannot ruin the system by clicking. If you ever feel lost, just click the "Home / Overview" button on the left to return to safety.

TIP: If a popup appears that you do not understand, simply click the 'X' button on the top right of the box.

2

Rule #2: The Screen Is Divided into 3 Clear Zones

Zone 1 (Left): Your Navigation Menu (takes you to POS, Menu, Tables, etc.).
Zone 2 (Top): Shows your Restaurant Name, Today's Date, and the Orange Fast POS button.
Zone 3 (Middle): Your main workspace where you take orders, add dishes, and view numbers.

TIP: Keep your mouse or finger focused on Zone 3 for 95% of your daily work.

3

Rule #3: The Software Works Even Without Internet

If your WiFi router disconnects or the broadband wire is cut, DO NOT PANIC! RestaurantOS has built-in Offline Billing. Your cashiers can keep taking orders, printing bills, and collecting cash. When internet returns, it updates automatically.

TIP: Never turn away a hungry customer just because the internet is down.

HOW TO KEEP THIS MANUAL HANDY

Print this PDF and keep it beside the main cash counter billing computer. Give copies to your Restaurant Manager and head Cashier so everyone is on the same page.

CHAPTER 1: WHERE EVERYTHING IS ON YOUR SCREEN

Like learning the road signs before driving a car

1.1 The Left Sidebar: Your Command Center

On the left edge of your screen is a dark gray vertical menu bar. Think of each icon as a door leading into a different room of your restaurant:

Overview / Home	*[House icon]*	Shows today's total money earned, order count, and sales chart.
POS (Cash Counter)	*[Storefront icon]*	The most important screen! Where you take orders and print customer bills.
Orders	*[Shopping Bag icon]*	List of all bills generated today. Reprint bills or view past receipts here.
Tables	*[Fork & Knife icon]*	See your dining room floor: Green tables are empty, Red tables are eating.
Kitchen Display	*[Chef Hat icon]*	Live screen for cooks to see what dishes to cook and in what order.
Menu	*[Open Book icon]*	Your food menu book! Add new dishes, change prices, or mark items sold out.
Inventory	*[Cardboard Box icon]*	Your storeroom: track Basmati rice, cooking oil, paneer, chicken, and spices.
Staff	*[People icon]*	Add waiters, cashiers, and managers. Assign simple 4-digit PIN passwords.
Reports	*[Bar Chart icon]*	See how much profit you made this week, GST tax reports, and top-selling dishes.
Settings	*[Gear icon]*	Configure restaurant name, address, phone number, GSTIN, and printer setup.

1.2 The Top Bar: Quick Status & Fast Buttons

• **Fast POS Button:** An orange button on the top right that says "Fast POS". Click this from any screen to jump straight into billing in 1 second.

• **Restaurant & Branch Switcher:** Shows your restaurant name (e.g. Bawarchi Royale). If you own 2 or 3 branches, click here to switch between them.

• **Universal Search (Ctrl + K):** Type any dish name, table number, or customer phone number to find it immediately.

CHAPTER 2: UPLOADING & ADDING YOUR FOOD MENU

How to enter your categories, dishes, prices & portion sizes

Before taking orders, you need your food items inside the computer. Adding dishes in RestaurantOS takes less than 30 seconds per item. Follow these 5 simple steps:

1

Step 1: Open the Menu Screen

Move your mouse to the left menu bar and click on the "Menu" button (the icon looks like an Open Book). You will see your food categories and dish list.

TIP: You can also press Ctrl + M on your keyboard to jump directly here.

2

Step 2: Create Your Food Categories First

Food categories are like the sections in your printed menu (e.g. "Starters", "Biryani & Rice", "Breads & Roti", "Chinese", "Beverages"). Click the "+ Add Category" button, type the name, and click Save.

TIP: Creating categories first makes it super fast for cashiers to find items during dinner rush.

3

Step 3: Click the "+ Add Dish" Button

Look at the top right of the Menu screen. You will see a black button that says "+ Add Dish". Click it. A clean form will appear on your screen.

TIP: Do not worry if you make a spelling mistake; you can edit it anytime.

4

Step 4: Fill in 4 Simple Details

1. Dish Name: Type the item name (e.g., "Paneer Butter Masala" or "Chicken Biryani").
2. Category: Click the dropdown and pick which section it belongs to.
3. Selling Price: Type the price in Rupees (e.g., 280).

TIP: You can optionally add a short description like "Cooked in rich cashew tomato gravy".

5

Step 5: Click the Green "Save Dish" Button

Scroll to the bottom of the form and click the green "Save Dish" button. Congratulations! Your dish is now saved and will immediately appear on the cashier billing screen.

TIP: That is all! Repeat this for your other dishes.

2.1 How to Handle "Half" and "Full" Portion Sizes

Does your restaurant sell dishes in different sizes? (e.g. Chicken Biryani: Half plate ¹180, Full plate ¹320). When creating or editing a dish, look for the section called "Portion Sizes / Variants". Click "+ Add Size", type "Half" with ¹180, and "Full" with ¹320. On the billing screen, the cashier can pick the size with 1 touch!

2.2 What to Do When Food Runs Out (Mark Sold Out)

If your kitchen runs out of Mutton Biryani at 9:30 PM, do NOT delete the dish! Simply go to the Menu screen, find the dish, and flip the green toggle button to "Inactive / Sold Out". The dish will instantly be grayed out on billing terminals so no waiter can mistakenly order it.

CHAPTER 3: TAKING ORDERS & BILLING AT THE CASH COUNTER (POS)

How any cashier can generate a bill in under 10 seconds

The POS (Point of Sale) screen is where cashiers spend 95% of their working day. We designed it like an oversized smartphone screen so anyone can use it without prior training.

1 Step 1: Open the POS Screen

Click the orange "Fast POS" button at the very top right of your screen (or click "POS" on the left menu). You will see food categories on the left, dish tiles in the middle, and the Current Bill slip on the right.

TIP: On touchscreens, cashiers can tap dishes directly with their finger!

2 Step 2: Choose Order Type (Dine-In, Takeaway, or Delivery)

At the top of the billing slip on the right, click one of 3 buttons:

- Dine-In: Customer is sitting at a table (Pick Table number, e.g. T-4).

TIP: Dine-In orders keep the bill open so customers can order more items later.

- Takeaway / Parcel: Customer is taking the food home in a carry bag.

3 Step 3: Tap or Click Dishes to Add to Bill

Click on any dish tile (e.g. "Butter Naan"). It immediately flies into the bill slip on the right!

- Want 2 or 3 plates? Tap the "+" plus button beside the item name.

TIP: You can also use the search bar at the top to type dish codes or names.

- Customer changed their mind? Tap the red "Trash" icon to remove it.

4 Step 4: Send Order to Kitchen (Click "Print KOT")

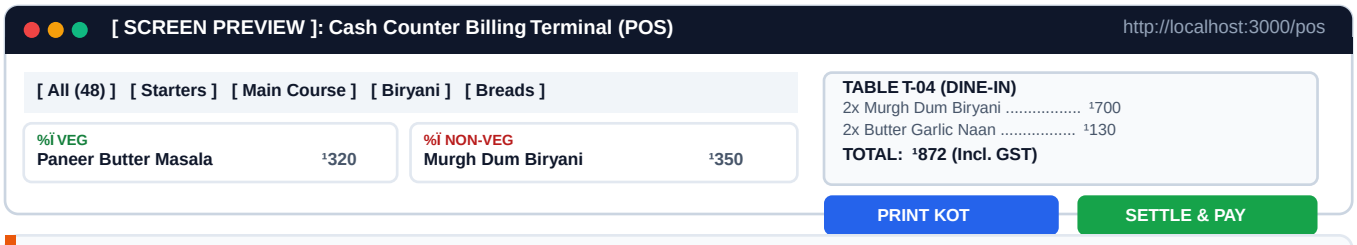
Once dishes are selected, click the blue button that says "Print KOT" (Kitchen Order Ticket). The order instantly prints inside the kitchen, and your cooks start preparing the food without waiting!

TIP: The table will automatically turn RED on the Tables screen.

5 Step 5: Customer Requests Bill? Click "Settle & Pay"

When the customer is done eating and ready to pay, open their table and click the big green button at the bottom right that says "Settle & Pay". The Payment Window will open.

TIP: Turn to Chapter 4 to see how to collect cash, UPI, or cards.



ADDING SPECIAL COOKING INSTRUCTIONS

If a guest says "make the noodles less spicy" or "no garlic in the dal", click the small pencil icon beside the item in the bill slip, type "Less Spicy", and print KOT. The instruction prints clearly for the chef in bold capital letters!

CHAPTER 4: COLLECTING PAYMENTS & PRINTING TAX INVOICES

Accepting Cash, UPI QR Code, Cards & Splitting Bills

When you click "Settle & Pay", RestaurantOS opens the Payment Window. Here is how to handle each payment method smoothly:

4.1 Payment Method 1: Cash Payment (With Auto-Change Calculator)

1. Click the "CASH" button on the payment window.
2. The screen shows the Grand Total (e.g. ¹420).
3. If the customer hands you a ¹500 note, type "500" in the Cash Received box.
4. The screen instantly displays in big green letters: "RETURN CHANGE: ¹80". You never have to do mental math in your head or make calculation errors!
5. Click "Print Tax Invoice". The cash drawer pops open automatically, and the receipt prints.

4.2 Payment Method 2: UPI / QR Code Payment (Google Pay, PhonePe, Paytm)

1. Click the "UPI QR" button.
2. A dynamic UPI QR code appears on the cashier screen (or on your counter customer display).
3. Customer opens Google Pay, PhonePe, Paytm, or BHIM on their phone and scans the QR code.
4. The exact bill amount is pre-filled on their phone. Once they pay and show you the green tick on their phone screen, click "Confirm Payment & Print".

4.3 Payment Method 3: Credit / Debit Card

1. Swipe or insert the customer's card on your bank POS swipe machine (Pine Labs, Paytm Soundbox, or HDFC EDC).
2. Once the card machine prints the bank slip, click "CARD" in RestaurantOS.
3. Click "Complete & Print Tax Invoice".

4.4 Understanding the Printed GST Bill

RestaurantOS automatically formats the bill according to official Indian GST rules:
• Top: Restaurant Legal Name, Branch Address, Phone, and 15-digit GSTIN number.
• Middle: Tax Invoice Number (e.g. INV-2026-0042), Date, Time, and Table Number.
• Line Items: Item name, quantity, rate, and total amount.
• Tax Breakdown: Subtotal, CGST 2.5%, SGST 2.5% (Total 5.0% GST), and Grand Total.
• Bottom: "Thank You! Please Visit Again" and your restaurant Wi-Fi password.

BUTTON TO LOOK FOR: [REPRINT INVOICE]
Symbol: Shopping Bag -> Click Order -> Reprint | Action: If a customer asks for a duplicate receipt or if printer ran out of paper mid-print.

CHAPTER 5: MANAGING TABLES & DINING ROOM FLOOR

Keep track of every seated guest with 3 easy colors

Click on the "Tables" button on the left sidebar (icon looks like a Fork & Knife). This screen gives you a bird's-eye view of your entire dining room. You can instantly see which tables are empty and which are occupied without walking into the dining hall.

5.1 The 3 Table Colors You Need to Know

1

GREEN TABLE = Empty & Ready for Guests

The table is clean and sanitized. When new guests arrive, click the green table tile to start taking their order immediately.

TIP: If you have 10 tables and 6 are green, you have 6 tables available for walk-ins.

2

RED TABLE = Guests Sitting & Eating (Active Bill)

The table has an active order being prepared or served. The tile displays the running bill amount (e.g. ¹850) and a small timer showing how many minutes they have been seated (e.g. 24 mins).

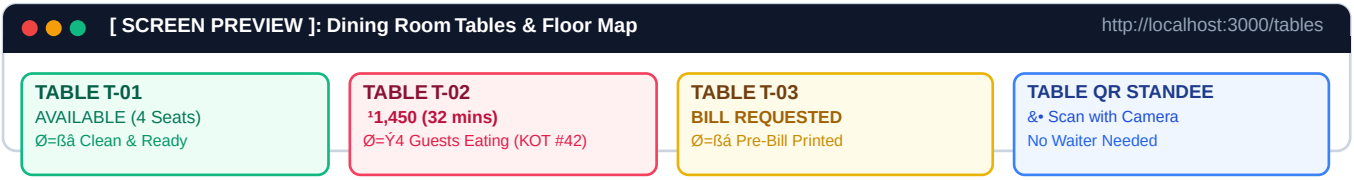
TIP: Clicking the red table allows you to add more rotis, drinks, or extra dishes.

3

YELLOW TABLE = Bill Requested (Preparing to Vacate)

The customer asked the waiter for the bill. The pre-bill has been printed and given to the table. This tells your floor manager that the table will become free in 2 to 3 minutes!

TIP: Once payment is completed, the table resets back to clean GREEN automatically.



5.2 What if Guests Want to Move Tables? (Table Transfer)

If a family is seated at Table 3, but Table 8 near the window becomes free and they ask to move: Click Table 3 -> Click the button "Transfer / Move Table" -> Click Table 8. All their food orders and running bill move to Table 8 instantly. You do not have to cancel or retype anything!

5.3 Merging Tables for Large Groups & Parties

If a birthday party of 12 people joins Table 5 and Table 6 together: Click Table 5 -> Click "Merge Tables" -> Select Table 6. Both tables combine into a single master bill slip.

CHAPTER 6: KITCHEN DISPLAY & KOT FOR YOUR COOKS

Eliminate shouting, wrong food orders & slow cooking times

In traditional restaurants, waiters run into the kitchen shouting orders, tickets get lost near the stove, and customers get angry when their food takes 45 minutes. RestaurantOS fixes this completely in two modern ways:

6.1 Option A: The Kitchen Order Ticket (KOT) Thermal Printer

Place a small 80mm thermal receipt printer inside your kitchen connected by LAN wire or WiFi. Whenever a waiter or cashier punches an order on POS, the kitchen printer instantly spits out a clean white KOT ticket with:

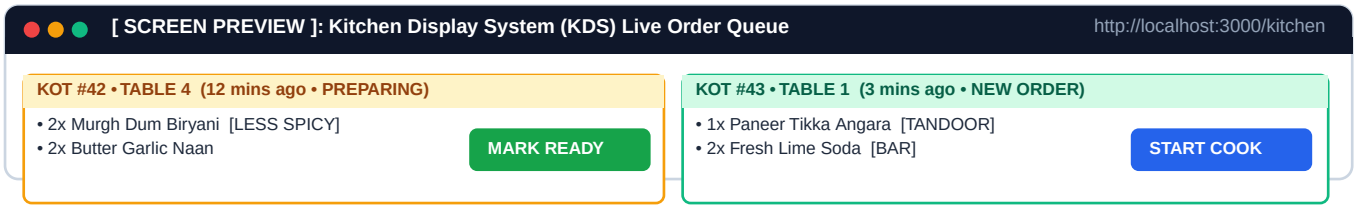
- Big Table Number (e.g. TABLE 7)
- Time & KOT Serial Number (e.g. KOT #28)
- List of Dishes with Quantities (e.g. 2x Garlic Naan, 1x Paneer Tikka)
- Cooking notes in bold (e.g. LESS OIL, VERY CRISPY)

6.2 Option B: The Kitchen Display Screen (KDS Tablet / TV)

Instead of paper tickets that can get wet or greasy, mount a cheap Android tablet or TV screen on the kitchen wall. Open "Kitchen Display" on the left menu (icon looks like a Chef Hat). Orders appear as large colorful cards:

GREEN CARD (0 to 10 mins)	Freshly ordered food. The cook has just started preparing it.
YELLOW CARD (10 to 20 mins)	Cooking in progress. Chef should be plating the food soon.
RED CARD (Over 20 mins)	Order is running late! Alerts the kitchen captain to expedite the food immediately.

When the cook finishes cooking the dish, they tap the screen on "Mark Ready". An alert sou
counter display so the food is served steaming hot!



CHAPTER 7: MANAGING STOREROOM & RAW INGREDIENTS

Stop food theft, track raw material costs & avoid running out

Your food inventory is your money sitting on storeroom shelves. If raw chicken, paneer, cooking oil, or Basmati rice go missing or spoil, your profits vanish. RestaurantOS tracks your storeroom automatically:

1

Step 1: Open the Inventory Screen

Click on "Inventory" on the left menu (icon looks like a Cardboard Box). You will see your raw material items, current stock levels, and valuation numbers.

TIP: At the top, you see 4 cards: Total Stock Valuation, Low Stock Alerts, Food Cost %, and Wastage Value.

2

Step 2: Add Your Raw Materials (Rice, Oil, Paneer, Spices)

Click the black button "+ Add Raw Material". Enter:

- Item Name: e.g. "Basmati Rice" or "Amul Butter".
- Category: Dairy, Grains, Poultry, Vegetables, or Spices.

TIP: Setting minimum levels ensures your manager purchases refills before stock runs out.

3

Step 3: How Automatic Stock Deduction Works (Recipe BOM)

Whenever a cashier sells 1 Butter Chicken on POS, RestaurantOS automatically deducts: 250g Chicken, 30g Butter, and 50ml Cream from your digital storeroom! You never have to manually count items every hour.

TIP: This connects your kitchen sales directly to your storeroom inventory.

4

Step 4: Recording Food Wastage or Spoilage

If 2 liters of milk spoiled overnight or a cook burned a pot of gravy: Click the button "Record Wastage" -> Select item -> Enter quantity -> Pick reason ("Spoiled" or "Burnt").

TIP: Recording waste keeps your profit reports accurate and highlights kitchen careless habits.

WHY FOOD COST % MATTERS TO YOU

Your Food Cost % should ideally stay between 28% and 32%. If your food cost goes above 35%, it means cooks are wasting ingredients or staff is giving away unauthorized free food. RestaurantOS alerts you on your dashboard in bright red!

CHAPTER 8: STAFF MANAGEMENT & 4-DIGIT PIN SECURITY

Give employees their own login while keeping your money safe

You cannot be at the restaurant 24 hours a day. RestaurantOS allows you to give every staff member their own simple 4-digit PIN (just like an ATM PIN) so they can do their job without accessing your confidential financial numbers.

8.1 The 4 Staff Roles & What They Can See

Owner / General Manager	*[Master PIN]*	Can see EVERYTHING: Daily profits, expenses, total bank collections, staff salaries, and change menu prices.
Cashier	*[Cashier PIN]*	Can bill orders, accept cash/UPI, and print receipts. CANNOT delete bills, view monthly net profits, or change menu prices.
Waiter / Captain	*[Waiter PIN]*	Can take orders at dining tables and punch KOTs from their mobile or tablet. CANNOT collect cash or settle bills.
Cook / Kitchen Staff	*[Kitchen PIN]*	Can only see the Kitchen Display Screen to cook orders and tap "Mark Ready". No access to billing or customer details.

8.2 How to Add a New Staff Member in 3 Steps

1. Click on "Staff" on the left menu (People icon).
2. Click the black button "+ Add Staff Member".
3. Type their Name (e.g. "Ramesh Kumar"), select their Role ("Cashier"), and type a 4-digit PIN (e.g. "4582"). Click Save. That's it! Ramesh can now log into the terminal using PIN 4582.

8.3 Preventing Theft: Supervisor Approval for Cancelled Bills

In dishonest restaurants, cashiers sometimes collect cash from a customer, pocket the money, and then delete the bill from the computer. In RestaurantOS, a cashier CANNOT delete or void a bill without an Owner or Manager typing their Master PIN! Every voided item is permanently logged in the audit trail.

CHAPTER 9: THE DAILY ROUTINE: OPENING, RUSH & CLOSING

Your restaurant's complete operating rhythm in 3 simple checklists

To make sure your restaurant runs like clockwork every day, follow this standard 3-step routine:

9.1 Morning Opening Checklist (Takes 3 Minutes)

1

1. Turn On Billing PC & Check Printer

Turn on your computer, double-click the RestaurantOS icon. Make sure the thermal printer has a fresh paper roll and the green power light is on.

TIP: Feed 1 test receipt to make sure paper is not jammed.

2

2. Start Cash Shift (Enter Starting Float / Petty Cash)

Click Staff -> Shift Register. Enter the cash currently in your physical cash drawer (e.g. ¹2,000 in small change notes for customer balance). This is your starting float.

TIP: Starting float prevents confusing opening change with today's fresh sales.

3

3. Quick Menu Scan for Out-of-Stock Items

Ask your chef if any ingredient is missing today. If fish or mutton is not available, toggle it to "Sold Out" on the Menu screen before the lunch crowd arrives.

TIP: Avoids embarrassing situations where guests order an unavailable dish.

9.2 Night Closing & Daily Z-Report (Takes 2 Minutes)

At the end of the night after the last guest leaves, you must close the business day and verify your money:

4

1. Open Home / Overview & Click "Export Z-Report"

At the top right of the Overview screen, click the button "Export Z-Report". The software instantly compiles all orders settled between morning and night.

TIP: Z-Report is the official daily business closure summary.

5

2. Match the Numbers with Your Physical Cash Drawer

The Z-Report displays:

• Total Cash Sales: e.g. ¹18,450

[SCREEN PREVIEW]: Daily Z-Report Shift Closure Snapshot http://localhost:3000/reports

BAWARCHI ROYALE — DAILY Z-REPORT (Shift #44)

Cash Sales: ¹18,450 | UPI (QR): ¹24,800 | Cards: ¹12,300

Total Revenue: ¹55,550.00 | GST Tax Collected (5%): ¹2,778.00

' PHYSICAL CASH DRAWER RECONCILIATION: 100% MATCH

CHAPTER 10: FREQUENTLY ASKED QUESTIONS & DON'T PANIC GUIDE

Simple answers to common situations you might face

10.1 Common Questions & 10-Second Fixes

Q1: What if my internet goes down or WiFi disconnects?

DON'T PANIC! RestaurantOS runs in Offline-First mode. You can keep taking orders, printing KOTs, settling bills, and giving change. All bills are saved safely on your computer. As soon as internet reconnects, everything syncs to the cloud automatically.

Q2: The thermal receipt printer is not printing!

Check 3 things:
1. Is the printer power switch ON with blue/green light?
2. Did the paper roll finish? Open the lid, insert a new thermal roll (make sure paper feeds from under the roll, not over).
3. Is the USB cable firmly plugged into the computer?

Q3: A customer wants to apply a 10% discount on their bill.

On the POS billing screen, look right below the item list. Click the button "Apply Discount". You can choose 10% percentage discount or type a flat Rupee discount (e.g. ¹50 off). The bill recalculates taxes and totals instantly.

Q4: How do I change the price of a dish if vegetable prices increase?

Go to Menu on the left sidebar -> Click the dish name -> In the "Price" box, delete the old number and type the new price (e.g. from 250 to 280) -> Click Save. The new price takes effect immediately on all billing screens.

Q5: Can I open RestaurantOS on my mobile phone while at home?

YES! RestaurantOS is cloud-ready. You can open your restaurant link on your iPhone or Android phone, log in with your Owner credentials, and see live sales updates, table status, and daily revenue while relaxing at home.

CONGRATULATIONS! YOU ARE READY TO RUN YOUR RESTAURANT LIKE A PRO

Remember: Software is just a tool to help you serve delicious food and keep your hard-earned profits safe. Keep this guide near your counter, train your staff for 15 minutes, and enjoy watching your restaurant grow!
