4.1 Role-Based Access Control (RBAC)

**Section 5:** Hardware, Printers & Payments **[Module 5]**

5.1 Thermal Printer & Cash Drawer Pairing

**HOW TO USE THIS GUIDE**

Follow the numbered steps sequentially. Actions requiring manager or supervisor authorization are marked with a Warning icon. Use the glossary at the end for unfamiliar restaurant and tax terms.

RestaurantOS is an enterprise restaurant operating system designed for Indian F&B businesses. It brings together high-speed POS, KDS, inventory recipe deduction, statutory GST billing, and multi-branch control into a single unified web and desktop platform.

To access the software, open Google Chrome, Safari, or Microsoft Edge and navigate to your store URL (e.g., http://localhost:3000). On touch monitors and tablets, click 'Add to Home screen' or install the Progressive Web App (PWA) to run in dedicated fullscreen kiosk mode.

- **Browser Support:** Optimized for Google Chrome v100+, Microsoft Edge, Safari, and Android Chrome.
- **Offline Readiness:** Local IndexedDB persistent queue continues billing if the internet drops.

## 1.2 Registering Your Restaurant Account

1. From the login screen, click 'Register Restaurant' (/register).
2. Enter legal business name, contact email, and secure password (minimum 8 characters).
3. Select business type: Restaurant, Cafe, Cloud Kitchen, Bakery, or Multi-Chain.
4. Enter your flagship outlet name, address, 15-character GSTIN, and 14-digit FSSAI number.
5. Click 'Create Restaurant Account' to automatically provision your tenant database and initial 30-day trial subscription.

**OWNER PASSWORD SECURITY**
Never share your primary Owner password with cashier or waiter staff. Create dedicated employee profiles under Staff management with role-based restrictions.

In the sidebar, navigate to Administration !’ Branches (/branches) and click 'Edit Settings' on your flagship outlet:

• GSTIN: Enter your state-issued 15-character GST number (e.g., 29AABCU9603R1ZM).

• Tax Split: Configure CGST at 2.5% and SGST at 2.5% (Total 5.0% GST). For interstate catering, set IGST at 5.0%.

• Pricing Mode: Choose Tax-Exclusive (5% added on top) or Tax-Inclusive (tax computed backwards).

• Sequential Invoicing: Set your branch code (e.g., IND) and starting invoice serial (e.g., IND/2026-27/00001).

## 2.2 Setting Up Dining Tables & QR Codes

Go to Main !’ Tables (/tables). Click 'Add Table' to register dining tables with capacity counts (2, 4, 6, 8 guests).

Click the 'QR Code' icon next to any table to generate high-contrast printable Table QR tent cards linking patrons directly to digital self-ordering (/qr-order?branch=IND&table=T-01).

Navigate to Catalog & Inventory !’ Menu (/menu):

1. Create food categories (Starters, Main Course, Biryani, Breads, Beverages, Desserts).
2. Map categories to default kitchen stations (MAIN_KITCHEN, BAR, BAKERY, BEVERAGE).
3. Add dishes with dietary badges: VEG (Green Dot), NON_VEG (Red Dot), or EGG (Yellow Dot).
4. Define portion variants: Half Portion ( ¹190) vs Full Portion ( ¹340).
5. Create modifier groups: e.g., Extra Butter (+ ¹20), Extra Cheese (+ ¹40), Choice of Spice (Mild, Medium, Hot).

Navigate to Customers & Staff !’ Staff (/staff). Click 'Add Employee' and assign appropriate roles:

• Manager: Operational control, discount approvals, supervisor refunds, inventory, and staff roster.

• Cashier: High-speed counter billing, payment settlements, and cash float. Restricted from P&L and settings.

• Waiter: Mobile handheld ordering (/mobile/waiter), table assignment, and modifier customization.

• Kitchen Staff: Kitchen Display System (/kitchen), updating order preparation stages.

• Accountant: Read-only access to GST tax summaries, Day Book exports, and expense ledgers.

Under Administration !’ Settings, configure your billing counter thermal printer:

• Select connection protocol: USB Raw Spooler, Network TCP/IP (e.g. 192.168.1.150:9100), or Browser Print.

• Select paper width: Standard 80mm (48 characters/line) or Compact 58mm (32 characters/line).

• Connect electronic cash drawer to printer RJ12 port; drawer will kick open on bill settlement.

• In Settings !’ Integrations, configure your merchant UPI VPA (e.g. restaurant@icici) to generate exact payable QR codes.

**BOM (Bill of Materials)**
The exact recipe breakdown of raw ingredients deducted when a dish is settled.

**CGST / SGST**
Central and State Goods and Services Tax (each 2.5% for standard restaurant dining in India).

**KDS**
Kitchen Display System — digital wall or counter monitors replacing paper kitchen slips.

**KOT**
Kitchen Order Ticket — a ticket dispatched to line cooks indicating items to prepare for a table.

**PWA**
Progressive Web App — software that runs in the browser but installs like a standalone native desktop app.

**UTR**
Unique Transaction Reference — a 12-digit banking reference code proving a UPI transaction succeeded.

- [ ] 1. Register restaurant profile and legal trading address (/settings).
- [ ] 2. Enter valid 15-digit GSTIN and verify 2.5% CGST + 2.5% SGST tax split (/branches).
- [ ] 3. Configure dining tables and print Table QR Tent Cards (/tables).
- [ ] 4. Create food categories, active dishes, prices, and dietary tags (/menu).
- [ ] 5. Create individual staff logins and assign 4-digit quick POS PINs (/staff).
- [ ] 6. Connect 80mm thermal billing printer and verify test print (/settings).
- [ ] 7. Test electronic cash drawer RJ12 solenoid kick pulse.
- [ ] 8. Punch test dine-in order and verify KOT appears on Kitchen Display (/kitchen).
- [ ] 9. Settle test bill via Cash and verify sequential invoice numbering.
- [ ] 10. Open cash register shift with starting cash float float (/pos).
