- Standards: Standardized A4 printable release with customer acceptance sign-off.

RestaurantOS Hospitality Engineering — Published November 2026

Standardized customer deployment stages

Section 1: Pre-Onboarding & Information Gathering **[Stage 1]**

1.1 Setup Template Preparation

Section 2: 15-Point Technical Onboarding Checklist **[Stage 2]**

2.1 Phase 1: Account, Taxes & Branches
2.2 Phase 2: Floorplan, Menu & Hardware
2.3 Phase 3: Verification, Training & Handover

STANDARDIZED SAAS DEPLOYMENT

Follow this protocol sequentially for every new customer. Do not modify the underlying application code per customer; customize only via the setup spreadsheet and configuration screens.

Before initiating technical onboarding, provide the customer with "RestaurantOS_Restaurant_Setup_Template.xlsx". Ensure the owner completes:

• Legal business name, brand trade name, registered address, and 14-digit FSSAI number.

• Valid 15-character state GSTIN number.

• Menu categories, food dishes, portion sizes (Half/Full), modifier add-ons, and base selling prices.

• Dining table numbers, seating capacities, and room sections.

• Staff list with designated roles (Manager, Cashier, Waiter, Kitchen) and 4-digit POS PINs.

• Printer hardware models (USB/LAN IP) and merchant UPI VPA.

1. Create Tenant Account: Under /register or /platform-admin, create organization entity with unique URL slug.

2. Assign Subscription Plan: Set plan tier (Starter, Growth, Pro, Enterprise) and verify branch quotas.

3. Configure Profile & Logo: Under /settings, verify trading name, phone, FSSAI, and upload logo.

4. Configure Indian GST: Under /branches, enter 15-digit GSTIN, verify 2.5% CGST + 2.5% SGST split, and set sequential invoice numbering prefix (e.g. IND/2026-27/).

5. Configure Outlets: Add secondary branches or cloud kitchens under /branches.

2.2 Phase 2: Floorplan, Menu & Hardware

6. Configure Dining Tables: Register tables with guest capacities and print Table QR Tent Cards (/tables).

7. Create Menu Categories: Map categories to kitchen stations (MAIN_KITCHEN, BAR, BAKERY, BEVERAGE).

8. Enter Menu Items & Prices: Configure dishes with Veg/Non-Veg badges, portion variants, and modifiers.

9. Create Staff Accounts: Assign roles and 4-digit quick PINs; verify Cashier is restricted from P&L.

10. Configure Payment Methods: Set counter UPI VPA (restaurant@icici) and verify UTR verification workflow.

11. Pair Thermal Printers: Connect 80mm billing printer and test RJ12 cash drawer solenoid kick pulse.

2.3 Phase 3: Verification, Training & Handover

12. Punch Test Order: Create dine-in order on Table T-01 with modifiers and chef notes; send KOT.

13. Verify Kitchen KDS: Advance ticket on /kitchen (NEW !’ ACCEPTED !’ PREPARING !’ READY).

14. Settle Bill & Verify GST: Settle via split cash + UPI; verify 50-paise round-off and inventory deduction.

15. Train Staff & Handover Manuals: Conduct 45-minute training and execute formal sign-off.
