OS

RESTAURANTOS OFFICIAL USER MANUALS SERIES

Target Audience: ALL RESTAURANT STAFF, SHIFT LEADS, STORE IT COORDINATORS

Version: 1.4.0 Production Edition | Indian F&B Compliant

PROBLEM SOLVING & QUICK REFERENCE

Troubleshooting & Quick Reference Guide

Instant solutions for login errors, printer issues, missing KOTs, UPI verification, offline sync, and permissions.

AUDIENCE & OPERATIONAL SCOPE

- Primary Users: All Restaurant Staff, Shift Leads, Store IT Coordinators
- Skill Level Required: Basic computer, touch monitor, or smartphone familiarity.
- Language: Plain English (Hindi and Bengali localized editions available).
- Core Modules: POS, Kitchen Display, Indian GST, Inventory, CRM, and Shift Auditing.
- Offline Support: Continues billing during network drops with automatic synchronization.

RestaurantOS Hospitality Engineering — Published November 2026

Quick orientation of key instructions

Section 1: Login, Access & Network Issues **[Module 1]**

1.1 Cannot Log In / 'Invalid Credentials'
1.2 Internet Disconnected / Offline Mode

Section 2: POS Billing & Printing Issues **[Module 2]**

2.1 Thermal Printer Not Printing Receipts
2.2 UPI Payment QR Not Confirming

Section 3: Kitchen KDS & Order Sync Issues **[Module 3]**

3.1 Order Not Appearing in Kitchen Display
3.2 Offline Orders Not Syncing to Server
3.3 Access Denied / HTTP 403 Forbidden

HOW TO USE THIS GUIDE

Follow the numbered steps sequentially. Actions requiring manager or supervisor authorization are marked with a Warning icon. Use the glossary at the end for unfamiliar restaurant and tax terms.

• What you see: Red banner 'Invalid email or password', or PIN is rejected.

• Possible reasons: Caps Lock enabled, trailing space in email, or account deactivated.

• Fix: Turn off Caps Lock. Enter email in lowercase. If forgotten, manager resets PIN in /staff in 10 seconds.

• Escalation: If credentials fail for all staff, check if the local server process has stopped.

1.2 Internet Disconnected / Offline Mode

• What you see: Amber top banner '& þ Offline Mode — Internet Disconnected. Billing continues locally.'

• What happens: RestaurantOS is offline-first. POS billing, KOTs, and thermal receipt printing continue normally.

• Fix: Continue billing without panic. Orders queue safely in local IndexedDB. Restart Wi-Fi router if fiber light is red. When internet returns, orders sync automatically.

NEVER DELETE LOCAL DATABASE FILES

NEVER delete database files (.db) or clear browser application storage during a network outage. Pending offline orders are stored locally and will sync once reconnected.

• What you see: Bill settled on screen, but 80mm/58mm thermal printer does not print.

• Possible reasons: Paper roll inserted backwards (feeds blank paper), paper hopper empty, USB cable disconnected, or printer power switched off.

• Fix: Open printer lid. Ensure paper feeds from the bottom with smooth thermal coating facing the printhead. Reconnect USB cable. Go to Settings !' Printers and click 'Test Print'. Reprint past bills from /orders.

2.2 UPI Payment QR Not Confirming

• What you see: Customer scanned counter QR code and shows green screen on their phone, but cashier received no notification.

• Fix: NEVER settle blindly. Check counter Soundbox. Ask customer for 12-digit Bank UTR (e.g. 431298012345). Enter UTR into verification box. If unverified after 2 minutes, ask for Cash/Card and note customer contact.

STRICT UPI VERIFICATION POLICY
QR code generation is NOT proof of payment. Only a verified 12-digit Bank UTR or audio Soundbox announcement confirms funds were credited to the restaurant account.

• What you see: Order punched on POS, but cooks say no ticket appears on kitchen screen.

• Possible reasons: Order was saved as 'Hold Order' instead of clicking 'Send to Kitchen (KOT)', or KDS screen is filtered to an isolated station (e.g. Bar station won't show curry orders).

• Fix: In /kitchen, tap 'ALL STATIONS' filter pill at top. Check POS to confirm KOT button was pressed.

3.2 Offline Orders Not Syncing to Server

• What you see: Internet has returned, but sync status still indicates pending operations.

• Fix: Open Administration !' Sync Monitor (/sync-monitor). Click 'Trigger Sync Now'. Operations sync with exponential backoff handling.

3.3 Access Denied / HTTP 403 Forbidden

• What you see: Clicking a navigation link shows '403 Forbidden: Insufficient permissions'.

• Why: RestaurantOS enforces strict RBAC. Cashiers and Waiters cannot view financial P&L or alter GSTIN tax settings.

• Fix: If user genuinely needs access, Owner or Manager navigates to /staff and elevates role.

Idempotency Key
A unique code assigned to every order ensuring duplicate network packets cannot cause double billing.

Soundbox
An audio device placed at the counter providing instant verbal announcement of UPI payments.

Thermal Paper
Heat-sensitive paper used in receipt printers that does not require ink cartridges.

- [ ] 1. Verify power and paper orientation on thermal receipt printers.
- [ ] 2. Ensure KDS screen station filter is set to 'All Stations' if tickets seem missing.
- [ ] 3. Verify 12-digit Bank UTR on customer phone for UPI payment confirmation.
- [ ] 4. Do not panic during internet disconnection; continue billing offline.
- [ ] 5. Check /sync-monitor upon network reconnection to verify queue clearance.
- [ ] 6. Contact Store General Manager for staff PIN and role permission changes.
